

## CLAIMS

1. Single-use packaging for a liquid, semiliquid, or powder substance, the packaging being of the type containing a breakable leakproof blister (20) containing  
5 one dose of said substance, the packaging being characterized in that it comprises a protective cover (12) made of two separable parts of leakproof material (13, 14), and in that said blister (20) is attached to the inside face (25) of one of said two parts.  
10
2. Packaging according to claim 1, characterized in that said blister (20) is housed in a pouch (24) comprising an applicator, said pouch is fixed to said inside face (25), and said applicator is impregnated with said substance  
15 when said blister is broken.
3. Packaging according to claim 2, characterized in that said pouch comprises a first part of flexible material (26) fixed to said inside face, and a second part of  
20 material (28) that is flexible and porous forming said applicator, and in that said two parts are united by a closed outline junction line (30) with said blister (20) being held captive between them.
- 25 4. Packaging according to claim 3, characterized in that a piece of cotton wool (32) or the like is housed inside the pouch.
5. Packaging according to any one of claims 2 to 4,  
30 characterized in that said protective cover is made of two flexible parts that are united by a closed outline junction line (35) surrounding the location of said pouch.
- 35 6. Packaging according to claim 5, characterized in that said junction line (35) surrounds an area that is

significantly greater than the area occupied by said pouch, substantially in the center thereof.

5 7. Packaging according to claim 5 or claim 6,  
characterized in that said junction line (35) is a line  
of low strength adhesive or heat-sealing enabling the two  
above-specified parts to be separated by a "peel" effect.

10 8. Packaging according to any one of claims 5 to 7,  
characterized in that said junction line (35) extends  
over a fraction of its length at a distance apart from  
the facing edges of said two flexible material parts,  
thereby defining pull tabs (34, 37) enabling said two  
parts to be separated.

15 9. Packaging according to any preceding claim,  
characterized in that a peel-off cover (18) containing an  
adhesive dressing (19) has one of its faces fixed on an  
outside face of said protective cover (12).

20 10. Packaging according to claim 9, characterized in that  
the outside face of said dressing (19) is weakly secured  
to the inside face of the portion (40) of the peel-off  
cover that is not fixed to the protective cover.
